Problem Identification

Established in 2013, Home Credit Indonesia, a multinational tech-based financial company, seeks modernization. Leveraging existing algorithms for credit assessment and marketing campaigns is pivotal for sustained growth and operational efficiency.

GOAL	OBJECTIVES	METRICS
The overarching goal is to leverage machine learning techniques to optimize and enhance various aspects of an online lending business, specifically reducing False Negative on customer prediction and campaign strategies.	Algorithm for Credit Assessment Accuracy Algorithm for Marketing Strategy : Campaign Strategy Optimization / Enhanced Promotion Efficiency	False Negative The lower the best Evaluation Recall Decreasing Opportunity Loss K_Cluster Clusterized customers for their credit behaviour

Data PreProcessing

Own Car Age fillna 0.

58 features with 40% missing values will be dropped.

The remaining will be fillna with median value.

**HANDLING
MISSING VALUE**

The dataset consists of a-targeted-dataset, a dataset without target, and a dataset that requires table joining.

Negative values convert to positive values.

Create 20 new features and cleaning value < 0

**FEATURE
ENGINEERING**

```
appttrain_final.to_csv('data_unsupervised.csv',  
                        index=False)  
(48744, 81)
```

```
apptest_final.to_csv('data_supervised.csv',  
                      index=False)  
(306972, 82)
```

**SAVING AS
NEWFILE**

Visualization and Business Insight

Supervised_data

Male customers exhibit an aggressive tendency in borrowing between the ages of 20 to 38, diminishing in the 39 onwards.

On the other hand, female customers display notable borrowing activity from 27 to 64.

These will be target to marketing campaign

Description	K_Cluster	Prediction	Count
Cluster 0 represents customers taking large and long-term loans with medium credit value.	0	approved(0)	604
	0	disapproved(1)	10725
Cluster 1 consists of customers typically making selective purchases, benefiting from low-interest rates, and preferring to settle debts promptly.	1	approved(0)	684
	1	disapproved(1)	14899
Cluster 2 comprises customers engaging in substantial-value shopping, benefiting from low-interest rates, and opting for a moderate repayment period. Consequently, they end up paying a significant amount of interest due to the extended loan duration.	2	approved(0)	529
	2	disapproved(1)	9011

Business Insight : Potential Business Prospects

The **THIRTIES** age range proves to be the most consumptive.

However, data analysis reveals that the highest approval rates are for those with **Higher Education**, while **Secondary/Secondary Special** experiences more rejections.

Therefore, marketing campaigns can be targeted at the THIRTIES group with Higher Education to stimulate transactions.

	AGE_CAT	COUNT
1	TWENTIES	5634
2	THIRTIES	9506
3	FOURTIES	7995
4	FIFTIES	6856
5	SIXTIES & ABOVE	4644

NAME_EDUCATION_TYPE	Total	CI 0	CI 1	CI 2
1. Secondary / secondary special	6549	1928	2957	1664
2. Higher education	2475	641	1138	696
3. Incomplete higher	366	81	179	106
4. Lower secondary	109	38	43	28
5. Academic degree	7	2	1	4

Business Recommendation

In the age range of 30 to 50, which sees the highest loan activity, there is significant untapped potential in the **Secondary/Secondary Special** education category.

Approximately **19,699** customers, predominantly rejected as Cluster 1 (*customers making selective purchases with low-interest rates and a preference for prompt debt settlement*), present an opportunity.

The business team can create a tailored product and financing system aligned with Cluster 0 & 1 characteristics and execute a targeted marketing campaign.
